

ALIGA-SMD

SuperMarketDoor

Vertical rapid action door

Fast – safe – economical.

Developed for shopping markets and production halls!

Find out more at www.aliga-tor.de

Areas of application

The ALIGA-SMD has been specially developed as a partition in shopping markets or production halls.

Functionality

In everyday operation, the flexible door leaf opens at a speed of up to 2.5 m/s, enabling the fast flow of personnel or goods.

The door leaf closes automatically at a speed of up to 1.5 m/s after a defined hold-open time.

In an emergency (e.g. in the event of a power failure), the door curtain opens automatically via the integrated weight compensation system.

Design/colours

Depending on the customer's requirements, the visible parts such as the running rails and shaft cover can be custom-coated.

In addition, the door leaf can be printed with a motif and thus used as an advertising space.

Technical details

- Dimensions: Up to 2500 × 2500 mm possible
- The basic construction consists of lateral guide rails and steel support profiles
- The door leaf is made of coloured, flexible, and tear-resistant PES fabric
- Various colours possible for the visible base construction
- Door curtain available with motif print
- Flexible door panel closure
- Wind classes 0
- Anti-crash system
- Electric drive with frequency converter and emergency stop button
- Membrane keypad: OPEN – STOP – CLOSE
- Opening or closing speed: 2.5/1.5 m/s, variably adjustable
- Closing edge protection by light grid over the entire opening height
- Automatic emergency opening via internal counterbalance
